

ABSTRACT

Wipes impregnated with a cleaning composition particularly suitable for hand dishwashing are disclosed. A wipe is provided which is formed of a water-insoluble substrate having a cleaning
10 composition applied thereto. The cleaning composition contains:

(a) surfactant; (b) a water-soluble thickening polymer having anionic side chains, such as polysaccharide or polysaccharide derivative, xanthan gum or a derivative thereof; and (c) a water-transfer agent capable of withdrawing water from the surfactant, such as silica, or more particularly fumed silica.
